

Wildlife Mitigation on Agricultural Land, Crops and Livestock
Thursday, December 3, 2009, 8:30 am - 4:30 pm
Alexander Room, Stonebridge Hotel
9223 - 100th Street, Fort St. John, BC

Wildlife consumes agricultural crops, defecate in crops that remain, prey on livestock, and damage farm infrastructure. These costs are borne by the producer, or the producer is partially compensated with government program dollars. Instead of compensating for loss, how can we prevent and mitigate the impacts of wildlife in the first place?

The Peace River Regional District invites anyone with an interest in or a perspective on solutions, whether you are in the agriculture sector, a hunting organization, Aboriginal, with government or have any other interest in the topic and some ideas for solutions to attend the meeting. This is your opportunity to provide input.

The purpose of the meeting is to collaborate on how to mitigate wildlife impacts on agricultural land, crops and livestock. Objectives of the meeting:

1. Share information on existing tools, projects and processes and accomplishments to date
2. Generate additional ideas, options and solutions from other perspectives
3. Prioritize options and solutions, and create an action plan to implement them
4. Build relationships and share insights on the concept of wildlife mitigation
